

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

*Table showing the Progress of Life Assurance in Great Britain during the Three Years 1849-50-51.*

BEING anxious to present to our readers a complete view of the progress which this important branch of assurance is making in this country, we endeavoured some few months ago to obtain from the Companies themselves the facts recorded under the heads given in this Table. It is evident, that for a proper comparison of one year with another, the particulars should be of a similar kind, and brought down, if possible, to the same date, or at least to the close of the financial year of each Company. Being only partially successful, we have been obliged to have recourse to the various reports and statements which have been published, in order to fill up such items as were required. This will account not only for the blank spaces, but for the apparent discrepancy of some of the details. Thus, the amount of new premiums sometimes includes single or commuted premiums, and even occasionally payments for immediate annuities. The claims sometimes imply the amount of assurances cancelled by death in the year; and in other cases, the amount actually paid on deaths in the year. The premiums on policies in force sometimes indicate the premiums received in the year; though we should have preferred giving the amount payable on policies remaining in force at the end of the year. The total income sometimes comprises the interest on the share capital, which is not in all cases distinguished under the head of Invested Capital, from the funds arising from the accumulation of premiums. We have no means of discriminating these items in many of the reports. Having collected all the facts we could obtain from published statements, we have endeavoured to approximate to the truth in other cases by assuming (what will be found sufficiently near the average) that the annual premiums may be about  $3\frac{1}{2}$  per cent. of the sum assured, and *vice versa*; and that the interest on invested capital may be about 4 per cent. per annum. By these assumptions, or from averages derived from one or other of the known figures, we have ventured to fill up some of the blanks, but in order to indicate that the authority is imperfect, have marked such amounts with an (\*).

It is much to be regretted that we cannot, in any branch of assurance in this country, indicate the rapid extension which is taking place, in the same way as we have given, in previous numbers of this Magazine, the summary of the business in France, Germany, and America. Till some uniform system of recording

the necessary particulars is adopted, such a compilation as this must always be in some degree imperfect; but time perhaps will enable us much to improve it, and in the meantime we shall be gratified to make any correction for which proper authority is given.

We have purposely deferred making a summary of the facts stated in the following Table, as some corrections may enable us in a future Number to show more accurately the increase of the business. In the meantime, however, it may be interesting to state that in 14 Companies, in which the number and amount of new assurances are given for each of the three years, the totals are as follow:—

Year.	New Assurances in 14 Companies.		
	Policies.	Amount Assured.	Average of each Policy.
1849	6,011	£ 2,310,554	£ 385
1850	6,378	2,604,558	408
1851	6,748	2,570,756	381
Total ..	19,137	7,485,868	391

From this it appears that the increase in the number of policies effected in 1850 was 6·1 per cent on the year 1849, and in 1851 5·8 per cent. on the year 1850; whilst the increase in the amount of sums newly assured was about 12·68 per cent. on the previous year in 1850, and a slight diminution in 1851 as compared with 1849. The result of the two years was an increase of about 12·26 per cent. in the number of policies in 1851 as compared with 1849, and 11·25 per cent. in the sums newly assured in the same period. The average amount of each assurance in the three years was £391.

We cannot avoid noticing here that it would be a very great advantage, in a statistical point of view, if all accounts and balance-sheets, intended to convey to the members a clear idea of the real state of the Companies, were printed in one general form. The items of receipts and expenditure must in every case be nearly the same in all Companies. In Proprietary Companies the share capital and interest and profits thereon should be kept distinct from the assurance fund; and in all Companies transacting different classes of business, the amounts assured, premiums, &c. under each should be distinguished. This subject is of too important a character to be thus hastily dismissed. We hope to resume it in another Number of this Magazine.
